

MARKING TAPES *data sheet*

Marking the underground pipelines with marking tape (non-detectable) is a great importance, especially for the reason of danger to human life in case of pipe damage. Raw materials used for such tapes are top quality (original or recycled LDPE). Standard roll length is 50, 100 or 200 meters (other lengths on request). They are made in compliance with european norm EN 12613.

PARAMETERS

Colour	Thickness	Width	Print (optionally)*
Yellow/Blue /Red/Green/Brown/Purple etc.	up to 2500 microns	50 mm – 600 mm	Warning Gas Pipeline/Warning Water Line/Warning Sewer Line

*possibility of making a different print on request
